- **Material:** Lightweight, perforated fleece
- **Function:** Weed suppression, targeted plant placement
- **Advantages:** Water-permeable, durable, easy to install

Climatex 50 g is a cost-effective alternative to traditional woven ground cover fabric and is ideally suited for weed suppression on planting areas. The perforated structure allows for precise placement of plant pots and provides space for directly sown crops through cross-shaped cutouts.

Thanks to its water permeability, the soil remains well-aerated and drained, while the fleece effectively inhibits the growth of unwanted plants.

With a width of **140 cm** and a length of **250 m**, it is ideal for professional use in nurseries, tree farms, and horticulture.
