Description

- **Application:** Direct fastening of 6 mm twin-wall (LTC) panels onto substructures
- **Function:** Prevents panels from being pulled out by wind loads
- **Additional Benefit:** Acts as a sealing element
- **Installation:** Mounted using sheet metal screws (not included)
- **Suitable For:** Panel thickness of 6 mm

Storm button for 6 mm twin-wall panels enables secure and permanent fastening of LTC panels directly onto substructures. It protects the panels against wind uplift and simultaneously seals the connection points against moisture and debris.

Installation is carried out using standard sheet metal screws (not included). This solution is ideal for greenhouse construction and other light-permeable roofing systems where reliable mechanical hold and weather sealing are required.
