Description

- **Application:** Roller screens with fixed winding shaft and descending fabric
- **Material:** galvanized steel, galvanized steel ball bearings, plastic rollers
- **Installation:** spacing approx. 3–3.20 m depending on fabric type
- **Special feature:** very stable roller bracket with extra-wide, fabric-friendly special rollers, ball-bearing mounted

The **roller bearing for 50 mm winding tube** provides reliable guidance and support for the winding shaft in roller screen systems with descending fabric. Its stable construction ensures smooth and consistent fabric movement.

The combination of hot-dip galvanized steel and durable plastic ensures high resistance and long service life. The ball-bearing TGU special roller enables particularly smooth operation and reduces fabric wear.

With a recommended installation spacing of around 3 to 3.20 meters – depending on the fabric type – the roller bearing can be integrated flexibly into various greenhouse structures. The extra-wide roller bracket protects the fabric and ensures secure guidance of the winding shaft.
