Description

- **Application:** Guiding 19 mm aluminum tubes along polyester wires in shading systems
- **Material:** Galvanized steel
- **Installation:** Mounted onto polyester wire, then clipped onto the 19 mm aluminum tube

Wire Guide (long) 38 mm is designed for **precise alignment of aluminum tubes** along polyester wires in greenhouse shading systems. First attached to the wire, it is then clipped onto the tube, ensuring smooth and stable movement of the fabric panels.

The fixed spacing of **38 mm** between wire and tube supports consistent guidance and is especially useful in suspended shading setups where increased clearance is required for optimal fabric motion.
